Education

Bachelor of Engineering in AI and Data Science,
L.J. Institute of Engineering Technology, Ahmedabad

Nov 2022 – June 2026

- SPI: 7.18 (Semester VI)

Work Experience

Data Science Intern, Petpooja – Ahmedabad, India

Nov 2024 – July 2025

- Worked with real-world business datasets using Python and Excel, applying supervised and unsupervised learning techniques to analyze data and improve model understanding.
- Explored deep learning fundamentals (CNNs, RNNs) and studied Transformer architectures, while gaining hands-on experience in Generative AI through structured prompt writing and testing.
- Cleaned, validated, and processed large invoice datasets, gaining practical exposure to real-world data preparation and business workflow automation.
- Worked on Generative AI workflows involving prompt engineering, multimodal AI systems, and Transformer-based architectures for AI-generated food image pipelines.

Data Science Intern, Prodigy InfoTech – Remote

July 2024 – Aug 2024

- Worked on data cleaning, exploration, and identifying patterns across different datasets, with focus on preparing data for analysis and understanding how data quality impacts results.
- Created basic charts and short reports to present findings clearly, which helped improve communication and interpretation of data.

Projects

LinkedIn AI Writing Assistant (LLMs, Streamlit, SQLite)

- Developed an AI-powered LinkedIn post generation system using Python, Streamlit, SQLite, and LLMs to generate personalized content based on topic, tone, and writing style.
- Implemented few-shot prompting and metadata-based retrieval using a custom post database, enabling context-aware content generation with dynamic example selection.
- Built a modular pipeline for post preprocessing, tag extraction, tone control, and AI-assisted generation with an interactive Streamlit interface. ““

AI-Based Resume Screening & Ranking System (NLP, Flask, SentenceTransformers)

- Developed an AI-powered resume screening system using Flask that ranks resumes based on job description relevance using NLP techniques.
- Implemented semantic similarity using SentenceTransformers and cosine similarity for context-aware resume matching beyond keyword comparison.
- Designed a hybrid scoring mechanism with skill extraction, matched/missing skill analysis, and an interactive dashboard for explainable candidate evaluation.

Credit Card Fraud Detection (Machine Learning, Streamlit)

- Built a classification model to identify fraudulent credit card transactions from imbalanced data.
- Used SMOTE to handle class imbalance and trained Logistic Regression and Random Forest models for comparison.
- Developed a simple Streamlit app to allow users to input transaction details and view predictions.

Skills

Languages & Databases: Python, SQLite, Java

AI/ML: Machine Learning, Deep Learning, CNNs, RNNs, LSTMs, Transformers, NLP, LLMs

LLMs & NLP: Prompt Engineering, Hugging Face, SentenceTransformers, Embeddings, Vector Databases, RAG

Libraries & Frameworks: Scikit-learn, TensorFlow, Pandas, NumPy, Flask, Streamlit, LangChain

Tools: GitHub, Jupyter Notebook, Google Colab, VS Code, Power BI

Certifications

- **Exploratory Data Analysis for Machine Learning**, IBM via Coursera
- **Building Generative AI-Powered Applications with Python**, IBM via Coursera
- **Data Structures Using Java**, University of Pennsylvania via Coursera
